UNPLND Mission

Version 1.0

Our Mission

UNPLND exists to remove the friction between having free time and creating unforgettable memories.

People should spend less time planning and more time living.

Every minute saved from decision making is another minute spent experiencing life.

Our North Star

If someone asks:

"What should we do today?"

The first answer should become:

"Open UNPLND."

That is our long-term objective.

Our Daily Mission

Every feature we build must improve at least one of these:

• Faster decisions

• Better experiences

• Stronger friendships

• More spontaneity

• Better memories

If a feature improves none of these...

it should not be built.

Product Objectives

UNPLND should allow users to:

Find something to do in under 60 seconds.

Trust every recommendation.

Discover places they would never have found alone.

Create memories automatically.

Feel excited before leaving home.

Company Principles

We build for people.

Not for investors.

Not for algorithms.

Not for vanity metrics.

Every product decision starts with one question:

"Does this genuinely improve someone's evening?"

Success Definition

Success is NOT:

More features.

More screens.

More AI.

More settings.

Success IS:

Less thinking.

More living.

Simplicity

The best interface is the one the user never notices.

Every unnecessary tap is a failure.

Every unnecessary screen is a failure.

Every unnecessary question is a failure.

AI Philosophy

Artificial Intelligence should feel invisible.

Users should never think:

"Wow, AI."

Instead they should think:

"That was exactly what I wanted."

User Promise

UNPLND promises that every generated plan is:

Relevant.

Achievable.

Within budget.

Open.

Realistic.

Optimized.

Enjoyable.

Design Promise

Every screen must feel:

Warm.

Comfortable.

Premium.

Natural.

Minimal.

Nothing should feel stressful.

Nothing should feel rushed.

Nothing should feel cluttered.

Engineering Promise

Code should be:

Readable.

Maintainable.

Scalable.

Reusable.

Fast.

Secure.

We optimize for long-term quality instead of short-term speed.

Business Mission

Build the world's most trusted spontaneous planning platform.

Not the biggest.

Not the loudest.

The most trusted.

Community Mission

UNPLND should strengthen real-world relationships.

The app should encourage people to spend less time scrolling and more time together.

Technology should create moments, not replace them.

Decision Framework

Before implementing any feature ask:

1. Does this reduce decision fatigue?
2. Does this make evenings better?
3. Does this create memories?
4. Is this simple?
5. Would Apple ship this?
6. Would Airbnb design it this way?
7. Does it feel human?

If the answer is "No" to multiple questions, rethink the feature.

Long-Term Goal

Within the next decade, UNPLND should become the global default platform for spontaneous leisure planning.

When people think about free time...

they think about UNPLND.

Final Statement

We are not building another app.

We are building the place where unforgettable evenings begin.

Everything else is secondary.

Claude Instructions

Never sacrifice user experience for implementation speed.

Never add unnecessary complexity.

Never build features that contradict the mission.

If a future decision conflicts with this document...

follow this document.

Mission has priority over convenience.
