09_ANIMATIONS.md

UNPLND Motion System

Version 1.0

Purpose

Animations are communication.

Animations explain.

Animations guide.

Animations reward.

Animations should never exist purely for decoration.

Every animation has a purpose.

Motion Philosophy

Think:

Apple

Airbnb

Arc Browser

Linear

Not:

Android Material

Gaming UI

Fancy Dribbble concepts

Animations should feel invisible.

Design Goals

Every animation should be:

Natural

Calm

Soft

Confident

Fast

Elegant

Premium

Golden Rule

Users should never wait because of an animation.

Animations should support speed.

Never slow it down.

Timing

Instant Feedback

50ms

Tap Animation

120ms

Card Expansion

250ms

Screen Transition

300ms

Modal

260ms

Bottom Sheet

300ms

Toast

220ms

Success Animation

450ms

Never exceed

600ms

Easing

Default

Ease Out

Entrance

Ease Out Cubic

Exit

Ease In

Spring

Only when physically appropriate

Never use Bounce animations.

Never use Elastic animations.

Screen Transitions

Push

Slide from right

Pop

Slide to right

Modal

Fade + Slide Up

Bottom Sheet

Slide Up

Dismiss

Slide Down

Never rotate screens.

Never flip screens.

Home Screen

When opening:

Content fades in

Cards slide upward

Header appears first

Then sections

Then CTA

Everything should feel layered.

Planner Flow

Each question appears individually.

Never show everything at once.

Question

↓

Answer

↓

Smooth transition

↓

Next question

The user should feel guided.

Not overwhelmed.

AI Generation

While generating:

Show animated route.

Moving location dots.

Soft loading shimmer.

Changing status text.

Examples

Finding great restaurants...

Checking opening hours...

Planning the perfect evening...

Avoid boring spinners.

The app should feel busy.

Route Reveal

After generation:

Map zooms

↓

Route appears

↓

Cards appear one by one

↓

CTA fades in

The result should feel rewarding.

Card Animation

Press

Scale

97%

Release

100%

Duration

120ms

Soft shadow increases slightly.

Card Expansion

Expand from current position.

Never teleport.

Always preserve context.

Bottom Sheet

Physics

Native iOS feeling

Supports:

Half

Three Quarter

Full Height

Dismiss

Swipe

Tap Outside

Button

Pull To Refresh

Elastic.

Minimal.

Never exaggerated.

Keep native feeling.

Loading Skeleton

Shimmer

Slow

Warm

Subtle

Never bright.

Never distracting.

Empty States

Illustration fades in.

Headline appears.

CTA appears.

Delay between elements:

80ms

Success Animation

Examples

Album Created

Memory Saved

Friend Added

Animation

Scale

Fade

Small Haptic

Done.

Never use confetti.

Never use fireworks.

Error Animation

Tiny shake.

One vibration.

Friendly retry button.

Never flash red.

Never punish the user.

Map Animations

Smooth camera movement.

Never instant jumps.

Pins appear progressively.

Route draws itself.

ETA updates softly.

Navigation

Tab changes

Fade

Slide

Maintain orientation.

Never lose user context.

Memory Album

Opening animation

Album cover expands.

Photos appear like physical prints.

Tiny rotation.

Soft shadow.

Feels like opening a scrapbook.

This is one of the signature moments of UNPLND.

Profile

Numbers count upwards.

Badges fade in.

Progress rings animate.

Very subtle.

Premium

Never flashy.

Premium should feel elegant.

Subtle glow.

Small transition.

No aggressive upsells.

Haptic Pairing

Selection

↓

Light Impact

Success

↓

Success Haptic

Error

↓

Error Haptic

Favorite

↓

Light Tap

Album Created

↓

Medium Success

Never trigger haptics repeatedly.

Performance

60 FPS minimum.

Target

120 FPS on supported devices.

Never drop frames.

Prioritize smoothness over complexity.

Accessibility

Respect "Reduce Motion".

Provide fade alternatives.

Never force animations.

Signature Moments

Every user should remember:

The first generated route.

The album opening.

Completing an evening.

These animations deserve extra attention.

Golden Principle

Animations should make users smile.

Not notice.

If users actively notice the animation...

it is probably too much.

Claude Instructions

Never invent random animations.

Every animation must improve:

Understanding

Orientation

Emotion

Reward

If none apply...

Do not animate.

Motion should feel like Apple.

Not like Dribbble.
