Product Requirements Document

Project

UNPLND

Version

1.0

Status

MVP

Executive Summary

UNPLND is an AI-powered spontaneous planning platform.

The application helps users answer one simple question:

"What should we do today?"

Instead of searching through multiple apps, comparing restaurants, checking opening hours and discussing ideas with friends, UNPLND generates an optimized experience within seconds.

The experience includes:

Activities

Restaurants

Bars

Events

Transportation

Navigation

Automatic memory creation

The goal is to eliminate decision fatigue.

Product Vision

People should spend less time planning.

People should spend more time living.

The best evening starts with one tap.

Product Goal

Build the world's most intuitive spontaneous planning app.

The app should feel magical.

Planning should disappear.

Only excitement should remain.

Core User Problem

Current situation:

Open Google Maps.

↓

Search Restaurant.

↓

Read Reviews.

↓

Check Opening Hours.

↓

Look for Activities.

↓

Check TikTok.

↓

Ask Friends.

↓

Nobody decides.

↓

45 minutes gone.

UNPLND replaces this entire process.

Target Users

Primary

18–30

Friends

Couples

Students

Travelers

Young Professionals

Secondary

Families

Tourists

Digital Nomads

Primary Use Cases

Friday Night

Saturday Night

First Date

Road Trip

Vacation

Rainy Day

These belong in Version 2.

AI Responsibilities

The AI must:

Recommend only open places.

Respect budget.

Respect travel time.

Respect weather.

Avoid duplicates.

Create logical evenings.

Recommend realistic routes.

Always provide alternatives.

Maps

Every stop must be reachable.

Travel time should be minimized.

Walking preferred.

Avoid unnecessary detours.

Performance Goals

Product Principles

Less thinking.

More living.

One tap.

Premium UX.

Beautiful memories.

No clutter.

Edge Cases

No internet.

No nearby restaurants.

Bad weather.

Everything closed.

Late night.

No transportation.

Budget impossible.

User alone.

Every edge case must have a fallback.

Future Vision

UNPLND should eventually become the operating system for spontaneous leisure.

Not only evenings.

Entire weekends.

Entire vacations.

Entire cities.

Non Functional Requirements

Scalable Architecture

Offline Cache

Fast Loading

Accessibility

Dark Mode

Secure Authentication

Privacy First

Localization Ready

Analytics Ready

Crash Reporting

Security

No API Keys inside app.

Encrypted authentication.

Secure storage.

Input validation.

GDPR compliance.

Minimal data collection.

Acceptance Criteria

A user who never used UNPLND before should:

Download.

Create account.

Generate a plan.

Navigate.

Create memories.

Without reading instructions.

If onboarding is required...

the UX failed.

MVP Release Criteria

Stable.

Beautiful.

Fast.

Useful.

Shareable.

Not feature-complete.

Only problem-complete.

Final Statement

The MVP is not a smaller version of the final product.

The MVP is the smallest version that still feels magical.

Never sacrifice the experience.

Never sacrifice simplicity.

Never sacrifice delight.

Claude Instructions

The goal is NOT to implement features.

The goal is to solve the user's problem.

If a feature does not reduce decision fatigue or improve the overall experience...

do not build it.

The PRD has priority over implementation convenience.
