11_USER_FLOW.md

UNPLND User Flow

Version 1.0

Purpose

This document defines every possible user journey inside UNPLND.

Every screen.

Every transition.

Every navigation path.

Every decision.

Claude must NEVER invent user flows.

Only implement the flows described here.

Golden Rule

The user should never wonder:

"What do I do next?"

Every screen should naturally guide the user.

Every transition should feel obvious.

Background

↓

Restore instantly on return.

Never lose progress.

Deep Links

Future support:

Invitation

Album

Route

Profile

Premium

Discover

All screens should support direct navigation.

Navigation Principles

Maximum depth:

3 levels

Users should never get lost.

Back always returns logically.

Never trap users.

UX Rules

One primary action per screen.

No dead ends.

No confusing menus.

No hidden navigation.

Always maintain orientation.

Performance Rules

Every transition:

<300ms

Planner:

Feels instant

Home:

Ready immediately

Memory:

Opens smoothly

Accessibility

Navigation must work:

One handed.

Screen Reader.

Large Text.

Reduced Motion.

Keyboard (future).

Analytics Events

Discover Clicked

Only meaningful events.

Never over-track.

Claude Instructions

Never invent navigation.

Never add extra screens.

Never skip required steps.

Every screen transition must exist in this document.

If a navigation path is missing,

stop implementation and request documentation.

The user flow is absolute.
