UNPLND Information Architecture

Version 1.0

Purpose

This document defines the complete information architecture of UNPLND.

Every screen.

Every navigation.

Every data dependency.

Every hierarchy.

Claude Code must follow this architecture exactly.

Product Structure

UNPLND consists of five main areas.

Home

Discover

Planner

Albums

Profile

Every future feature belongs inside one of these.

Global Navigation

Bottom Navigation

Scalability

Architecture should support

100 users

↓

1,000

↓

10,000

↓

100,000

↓

1 Million

Without redesigning navigation.

Golden Rule

Information architecture should feel invisible.

Users should never think about structure.

They should simply know where everything is.

Every single time.

Claude Instructions

Never create new screens outside this hierarchy.

Never duplicate functionality.

Reuse navigation.

Reuse architecture.

If a feature requires architectural changes,

update this document first.

Architecture has priority over implementation.
