UNPLND Experience Engine

Version 1.0

Priority: CRITICAL

Status: MVP

Purpose

UNPLND does not generate routes.

UNPLND creates experiences.

The difference is everything.

A perfect evening is not a list of places.

It is a story.

Every generated evening should have:

A beginning.

A middle.

A climax.

A satisfying ending.

Experience Philosophy

People rarely remember:

The restaurant.

The coffee.

The parking lot.

People remember:

The sunset.

The conversation.

The laugh.

The surprise.

The feeling.

The Experience Engine exists to maximize memories.

Emotional Timeline

Every evening follows emotional pacing.

Arrival

↓

Comfort

↓

Connection

↓

Exploration

↓

Peak Moment

↓

Relaxation

↓

Reflection

Never random.

Every stop has emotional purpose.

Rule 1

Every stop needs a reason.

Never include a location because it is popular.

Ask:

Why is this stop here?

If no answer exists...

Remove it.

Rule 2

Avoid Decision Fatigue

Users should never choose between:

15 restaurants

28 cafés

42 bars

UNPLND decides.

Confidence beats quantity.

Rule 3

Quality over Quantity

Three unforgettable places

↓

Better than

Seven average places.

Never maximize stop count.

Maximize experience quality.

Rule 4

Build Anticipation

Every next stop should increase curiosity.

Users should think:

"I'm excited for what's next."

Rule 5

Respect Energy

Not every evening should become louder.

Some evenings should become calmer.

The engine must understand pacing.

Emotional Modes

Relaxed

↓

Slow

Warm

Nature

Quiet

Coffee

Books

Sunset

Romantic

↓

Conversation

Views

Candles

Walking

Dessert

Night Views

Adventure

↓

Movement

Exploration

Unexpected Places

Scenic Drives

Hidden Gems

Party

↓

High Energy

Music

Cocktails

Crowds

Late Night

Luxury

↓

Views

Fine Dining

Cocktail Lounges

Elegant Atmosphere

Student

↓

Budget

Street Food

Free Activities

Parks

Cheap Cafés

Always match the emotional expectation.

Memory Moments

Every generated evening should contain

at least one

Memory Moment.

Examples

Sunset viewpoint

Beautiful bridge

Hidden street

Lake

Lookout

Live music

Bonfire

Street performance

Late-night dessert

Scenic drive

Beach

Rooftop

Night skyline

Conversation spot

Photo location

This moment often becomes

the most remembered part.

Surprise Principle

The AI should occasionally surprise users.

Example

User expects

Restaurant

↓

Bar

↓

Club

Instead

Restaurant

↓

Hidden viewpoint

↓

Cocktail bar

↓

Night walk

↓

Late dessert

The surprise should always feel intentional.

Never random.

Story Structure

Beginning

Comfort

Middle

Exploration

Peak

Emotion

Ending

Warm conclusion

The ending matters as much as the beginning.

The Last Stop

Never end abruptly.

Preferred endings

Night walk

Viewpoint

Dessert

Late coffee

Beach

River

Quiet place

Drive home playlist

Reflection

The last memory lasts longest.

Conversation Boosters

Whenever possible

Include places where people naturally talk.

Walking.

Views.

Quiet cafés.

Parks.

Benches.

Bonfires.

Conversation creates memories.

Social Moments

Friends

↓

Activities

Competition

Laughing

Shared food

Photos

Couples

↓

Privacy

Views

Walking

Romantic lighting

Families (Future)

↓

Playgrounds

Nature

Easy logistics

Weather Psychology

Rain

↓

Cozy cafés

Indoor games

Bookstores

Cinema

Sunny

↓

Outdoor first

Golden Hour

↓

Prioritize viewpoints

Sunset should never be ignored if conditions are exceptional.

Seasonal Logic

Spring

Flowers

Parks

Walks

Summer

Water

Sunset

Late evenings

Autumn

Forests

Coffee

Warm lighting

Winter

Christmas lights

Indoor

Hot drinks

Less Is More

If one location already creates a perfect evening...

Do not add more.

The experience is complete.

Experience Score

Every generated evening receives an internal score.

Categories

Flow

Emotion

Travel Time

Budget

Variety

Memory Potential

Conversation Potential

Comfort

Only routes above the quality threshold may be shown.

Hard Rules

Never recommend

Five restaurants.

Three bars.

Long unnecessary drives.

Unsafe areas.

Closed locations.

Poorly rated places.

The Feeling Test

After reading the route,

the user should think:

"I actually want to do this."

Not:

"That looks efficient."

Efficiency is invisible.

Emotion is visible.

Golden Rule

People don't remember plans.

People remember feelings.

The Experience Engine optimizes feelings.

Not routes.

Claude Instructions

Whenever generating or displaying a plan:

Ask yourself:

Where is the excitement?

Where is the surprise?

Where is the memory?

Where is the ending?

If one is missing...

The evening is incomplete.

Never optimize only for logistics.

Optimize for unforgettable experiences.
