UNPLND Evening Companion

Version 1.0

Priority: CRITICAL

Status: MVP

Purpose

Navigation is not transportation.

Navigation is guidance.

UNPLND should accompany the user throughout the evening.

The app is not left behind once Google Maps opens.

It remains part of the experience.

Mission

Guide users through their evening naturally.

Without becoming annoying.

Without becoming distracting.

Users should feel accompanied.

Never monitored.

Evening Flow

Plan Created

↓

Start Evening

↓

Navigate to Stop 1

↓

Arrival Detected

↓

Open Stop Details

↓

Enjoy Experience

↓

Suggest Next Stop

↓

Repeat

↓

Evening Completed

↓

Memory Album

Evening Status

The app always knows the current state.

Planning

Traveling

Arrived

Enjoying

Leaving

Navigating

Completed

This drives the UI.

Arrival Detection

Signals

GPS

Movement

Speed

Manual Confirmation

Confidence Score

Only mark arrival when confidence is high.

Never assume immediately.

Arrival Card

When arriving:

Beautiful bottom sheet.

Example

Welcome to your first stop.

Enjoy your dinner ❤️

Estimated stay

90 minutes

Buttons

I'm Here

Skip

Need Another Idea

During Activity

UNPLND becomes quiet.

No unnecessary notifications.

Only important updates.

The app should disappear while users enjoy the moment.

Leaving Reminder

Near estimated end:

Soft notification.

Example

Ready for the next adventure?

Button

Continue Evening

Never pressure users.

Live Timeline

Current stop highlighted.

Completed stops fade slightly.

Remaining evening visible.

Progress updates automatically.

ETA Updates

Recalculate when

Traffic changes

Weather changes

Manual replacement

Unexpected delays

Always communicate changes calmly.

Skip Stop

User may skip.

Timeline updates instantly.

AI rebalances remaining evening.

Never punish users.

Pause Evening

User can pause.

Examples

Unexpected meeting

Rest

Shopping

Resume later

Timeline adjusts.

Finish Early

User may finish.

UNPLND still creates

Memory Album

Partial timeline

Visited locations

The evening still matters.

Smart Suggestions

Only when useful.

Examples

You're early.

Nearby viewpoint?

Beautiful sunset in 15 minutes.

Dessert nearby?

Never interrupt conversations.

Never spam.

Notification Philosophy

Maximum usefulness.

Minimum interruption.

Every notification answers:

Does this genuinely help?

If not

Do not send it.

Google Maps

Launch externally.

Remember current stop.

Detect return.

Resume immediately.

Never lose progress.

Apple Maps

Same behavior.

Native support.

Offline Navigation

Last known route cached.

Timeline available.

Arrival confirmation manual if needed.

Graceful degradation.

Privacy

Location tracking

Only during active evening.

Never background track outside active routes.

Never sell location data.

Users remain in control.

Battery Optimization

GPS frequency adapts.

High precision only while navigating.

Reduce updates during long stays.

Minimize battery drain.

Safety

Never encourage unsafe behavior.

Never encourage speeding.

Never recommend dangerous shortcuts.

Late night

↓

Prefer well-lit routes when possible.

Accessibility

Large buttons.

VoiceOver.

Reduced motion.

Readable ETA.

Simple interactions.

Animations

Arrival

↓

Bottom sheet rises softly.

Progress

↓

Timeline advances smoothly.

Next stop

↓

Card gently highlights.

Everything calm.

stop_skipped

pause_evening

resume_evening

evening_completed

Only meaningful analytics.

Delight Moments

Arrival greeting.

Beautiful sunset reminder.

Memory Moment prompts.

Progress feels rewarding.

Completion feels satisfying.

DO NOT

Do NOT constantly notify.

Do NOT continuously ask for input.

Do NOT interrupt experiences.

Do NOT make users stare at their phones.

The real evening is more important than the app.

Success Criteria

Users should forget they are using an app.

They should simply enjoy the evening.

UNPLND quietly supports them.

Nothing more.

Nothing less.

Golden Rule

UNPLND should never compete with real life.

It should enhance it.

Claude Instructions

Always prioritize the real-world experience over screen time.

If users spend less time looking at their phones because of UNPLND...

the product is succeeding.

The app should guide people into the world.

Not keep them inside the app.
