23_SETTINGS.md

Settings Specification

Version 1.0

Priority: MEDIUM

Status: MVP

Purpose

Settings should never overwhelm.

Users should rarely visit this screen.

When they do, everything should be obvious.

Simple.

Clean.

Fast.

Philosophy

The best settings page is the one users almost never need.

UNPLND should intelligently choose sensible defaults.

Customization exists only where it adds real value.

Delight Checklist

✓ Easy to understand.

✓ Minimal.

✓ Native feeling.

✓ Fast.

✓ No unnecessary options.

DO NOT

Do NOT expose technical settings.

Do NOT overwhelm users.

Do NOT require restarting the app.

Do NOT bury important privacy controls.

Do NOT ask users to configure everything.

UNPLND should work beautifully out of the box.

Success Criteria

A first-time user should understand the entire Settings screen within one minute.

No searching.

No confusion.

Everything exactly where expected.

Golden Rule

Settings exist to give control.

Not complexity.

Whenever possible,

remove settings instead of adding them.

Claude Instructions

Before introducing a new setting ask:

Can the app make this decision automatically?

If yes,

do not create a setting.

Simplicity always wins.
