26_EXPERIENCE_SCORING.md

Experience Scoring Engine

Version 1.0

Priority: CRITICAL

Status: MVP

Purpose

Not every valid route is a good route.

UNPLND should only present evenings that feel exciting, balanced and memorable.

The Experience Scoring Engine evaluates every generated plan before it is shown to the user.

Only plans above the quality threshold are accepted.

Philosophy

A technically correct plan is not enough.

The goal is emotional quality.

The best evening is not the one with the shortest route.

It is the one users remember.

Overall Score

Every generated evening receives a score from:

0 → 100

Only scores of **80 or higher** should be presented immediately.

Scores between **65–79** may be improved automatically.

Scores below **65** should be regenerated.

Score Categories

Questions

Does the evening tell a story?

Does every stop have a purpose?

Does the energy evolve naturally?

Avoid abrupt transitions.

Memory Potential

High score examples

Sunset

Beautiful architecture

Live music

Lake

Night skyline

Scenic drive

Great conversations

Unique activity

Low score examples

Generic chain restaurant

Long shopping mall visit

Random parking lot

Pure logistics

Travel Efficiency

Walking

Excellent

0–10 min

Good

10–15 min

Acceptable

15–20 min

Poor

20+ min

Avoid unnecessary zig-zag routes.

Budget Accuracy

Ideal

80–95%

of available budget.

Never exceed the budget.

Very low spending may also reduce quality if better experiences are available.

Variety

Excellent

Personalization (Future)

Adjust weights over time.

Example

User prefers nature.

Increase

Nature score.

User dislikes nightlife.

Reduce

Nightlife weighting.

Never overfit.

Still encourage discovery.

Transparency

Users never see the full score.

They only experience the quality.

The score exists for internal decision making.

Performance

Scoring must complete

<200ms

after AI response.

Never slow down the experience.

Average Route Score

Rejected Routes

Retry Rate

Accepted Routes

Completion Rate

Album Creation Rate

High-score evenings should correlate with higher user satisfaction.

Delight Checklist

✓ Evening feels balanced.

✓ Contains one memorable highlight.

✓ Budget respected.

✓ Route feels natural.

✓ User is excited after reading it.

DO NOT

Do NOT optimize only for distance.

Do NOT optimize only for ratings.

Do NOT optimize only for popularity.

Do NOT maximize stop count.

Optimize for memories.

Golden Rule

UNPLND is not trying to find the "best restaurant."

UNPLND is trying to create the best evening.

That difference defines the product.

Claude Instructions

Always score every generated route.

If the route would not impress you personally,

improve it before presenting it.

Never accept mediocrity.

Every accepted evening should feel intentionally crafted.
