Analytics & Product Intelligence

Version 1.0

Priority: HIGH

Status: MVP

Purpose

Analytics exist to improve the product.

Never to manipulate users.

Every tracked event must help answer a real product question.

If an event has no purpose,

do not collect it.

Philosophy

Measure memories.

Not addiction.

Measure completed evenings.

Not endless sessions.

Measure real-world impact.

Not vanity metrics.

North Star Metric

Completed Evenings

Definition

A planned experience that reaches the final stop or is intentionally completed by the user.

This is the most important metric in UNPLND.

Everything should improve it.

Secondary Metrics

Memory Albums Created

Albums Revisited

Plans Generated

Routes Started

Routes Completed

Friends Invited

Hidden Gems Discovered

Cities Explored

Average Route Score

Premium Conversion

User Retention

Metrics We Do NOT Optimize For

Screen Time

Session Length

Notification Opens

Feed Views

Ad Impressions

Clicks without value

Follower Count

These can become side effects,

never goals.

Product Funnel

App Install

Album Shared

↓

Second Evening

This funnel defines activation.

Activation Metric

A user is considered activated after:

Creating

and

completing

their first evening.

Not after registration.

Retention

Track

Day 1

Day 7

Day 30

Day 90

Yearly

Retention should correlate with

completed evenings,

not app opens.

Event Naming

Format

feature_action

Examples

planner_started

planner_completed

route_opened

album_shared

favorite_added

premium_purchased

Simple.

Predictable.

Consistent.

Event Properties

Only include data that is useful.

Examples

Mood

Budget Range

Group Size

Transport

Generation Time

Route Score

Never include unnecessary personal information.

Privacy

Analytics should never store:

Message content

Photo content

Precise location history

Passwords

Payment details

Private notes

Always minimize collected data.

Anonymous Analytics

Where possible,

aggregate data.

Prefer trends over identities.

Dashboards

Not allowed

Privacy

Security

Core experience

Trust should never be A/B tested.

Performance Metrics

Cold Start

Planner Time

Album Open Time

Crash Free Sessions

API Latency

Route Quality

All monitored continuously.

Quality Metrics

Average Route Score

Album Creation Rate

Route Completion Rate

Memory Revisit Rate

These indicate product quality.

Premium Metrics

Conversion

Retention

Cancellation Rate

Feature Usage

Never optimize using dark patterns.

Error Tracking

Track

Planner failures

AI failures

API failures

Offline mode

Permission denials

Authentication errors

Every error should have an owner.

Data Retention

Keep only what is necessary.

Respect local regulations.

Support data export.

Support complete deletion.

Privacy first.

Delight Metrics

Track

Albums revisited

Memory callbacks opened

Golden Hour suggestions accepted

Seasonal collections used

These indicate emotional engagement.

Retention

↓

Premium

Everything starts with completed evenings.

Delight Checklist

✓ Analytics improve the product.

✓ Privacy respected.

✓ No manipulation.

✓ Simple event structure.

✓ Meaningful KPIs.

DO NOT

Do NOT measure everything.

Do NOT collect data without purpose.

Do NOT optimize for screen addiction.

Do NOT create surveillance.

Do NOT compromise trust.

Success Criteria

The analytics system should help answer:

How can we create better evenings?

Not:

How can we keep users inside the app longer?

Golden Rule

The best metric is a life well lived.

UNPLND succeeds when people spend less time on their phones

and more time making memories.

Claude Instructions

Whenever you introduce a new feature,

define:

What question are we trying to answer?

If no meaningful question exists,

do not add analytics for it.

Every tracked event must earn its place.

Protect user trust above all else.
