17_HOME.md

Home Screen Specification

Version 1.0

Status: MVP

Purpose

The Home Screen is the emotional center of UNPLND.

Users should immediately feel inspired.

Never overwhelmed.

Never confused.

The Home Screen should answer one question:

"What do I want to do today?"

Primary Goal

Encourage users to create a plan.

Everything else is secondary.

Screen Hierarchy

Large Greeting

↓

Weather Card

↓

Primary CTA

↓

Continue Current Plan (if exists)

↓

Quick Categories

↓

Discover Inspiration

↓

Recent Memories

↓

Bottom Navigation

search_opened

Only meaningful events.

Performance

Home visible

<500ms

Weather async.

Images lazy.

Memory cached.

Always prioritize perceived speed.

Components Used

Header

WeatherCard

PrimaryButton

CategoryChip

InspirationCard

MemoryCard

BottomNavigation

Toast

LoadingSkeleton

Only reusable components.

DO NOT

Do NOT overload the Home Screen.

Do NOT show more than one primary CTA.

Do NOT display ads.

Do NOT autoplay videos.

Do NOT show endless feeds.

Do NOT imitate TikTok.

Home should feel calm.

Not addictive.

Success Criteria

The user opens the app.

Within five seconds they should know:

What to do next.

Without thinking.

Without searching.

Without confusion.

Claude Instructions

The Home Screen is the heartbeat of UNPLND.

Every pixel should encourage the user to leave the couch and create a memory.

Never optimize for engagement.

Optimize for action.

The user should close the app because they are going outside.

That is success.
