README.md

UNPLND OS

> Source of Truth for the complete UNPLND ecosystem.

Version: 1.0

Status: MVP

Last Updated: July 2026

Overview

UNPLND is an AI-powered lifestyle platform that eliminates the question:

> **"What are we doing today?"**

Instead of forcing users to search through multiple apps, compare restaurants, browse Google Maps, read reviews, check opening hours and coordinate with friends, UNPLND creates an entire experience in seconds.

The product is **not** an itinerary generator.

The product is **not** a restaurant finder.

The product is **not** a social network.

UNPLND creates memorable experiences.

The goal is to become the default operating system for spontaneous free time.

Vision

People spend more time deciding what to do than actually enjoying life.

UNPLND removes that friction.

Every recommendation should feel like it came from your smartest friend.

The experience should feel effortless.

Warm.

Human.

Premium.

Fun.

Mission

Build the world's best spontaneous planning platform.

The platform should help users:

- spend less time planning
- experience more
- discover new places
- create memories
- strengthen friendships

UNPLND should become the first app users open whenever they don't know what to do.

Core Product

The user answers a few simple questions.

Examples:

- mood
- budget
- group size
- transportation
- available time
- weather

The AI generates a complete route.

Example:

18:30 → Italian restaurant

20:00 → Bowling

22:00 → Cocktail Bar

00:30 → Club

Navigation is included.

Every stop is optimized.

Product Philosophy

Never overwhelm the user.

Never ask unnecessary questions.

Every screen has one primary goal.

Every animation has a purpose.

Every interaction should feel satisfying.

The app should never feel "technical".

Users should feel like they are talking to a friend.

Design Philosophy

Inspired by:

- Apple
- Airbnb
- Spotify
- Notion
- Arc Browser

Avoid:

- Material Design feeling
- Corporate interfaces
- Sharp edges
- Neon colors
- Gamer aesthetics

Keywords:

Warm

Cozy

Premium

Organic

Minimal

Modern

Design Rules

Everything is rounded.

Large spacing.

Few words.

Large touch targets.

Lots of white space.

Subtle shadows.

Natural animations.

Beautiful typography.

No clutter.

No visual noise.

Target Audience

Primary

18–30 years old

Friends

Couples

Students

Young professionals

Travelers

Secondary

Families

Tourists

Expats

Product Pillars

1. Planning
2. Navigation
3. Memories
4. Friends
5. Discovery

Success Metrics

Users should:

Spend less than 60 seconds creating a plan.

Open the app every weekend.

Share generated albums.

Invite friends.

Return weekly.

MVP

The MVP includes only the essential experience.

Everything unnecessary is postponed.

The MVP must already feel premium.

Future

Premium

Social Feed

Challenges

Badges

AI Companion

Travel Mode

Weekend Trips

Group Planning

Smart Notifications

Automatic Memory Books

Development Principles

Quality over speed.

UX over features.

Consistency over creativity.

Simple over clever.

Performance over complexity.

Accessibility first.

AI Principles

AI should never hallucinate locations.

Only recommend places that are open.

Respect budget.

Respect transportation.

Respect weather.

Always provide alternatives.

Folder Structure

Every markdown inside this repository is considered the single source of truth.

Claude Code must never invent features.

Claude Code must never redesign screens.

Claude Code must always consult the relevant markdown before implementation.

If multiple markdowns overlap, the more specific markdown has priority.

Golden Rule

If a feature is not documented,

it does not exist.

Never assume.

Never improvise.

Build exactly what is described.
